**Looking for an affordable backup solution?**

**One that's automated and fool-proof?**

**And affordable and flexible to your needs?**

## **The Small Business Issue**

It's critical to have a backup copy of your business information should the worst happen. You might already know this or even have lost files in the past. Sometimes it's just an unwelcome frustration but occasionally it can be catastrophic.

To date, it's not always been simple or affordable to negate these risks. Research supports this: just 10% of businesses do regular backups, and only 4% are correctly backing up the information they need to continue trading should the worst happen.

The reasons for this are plentiful: traditional backups often have high costs to both purchase and maintain, and require trained staff to carry out laborious tasks, such as tape changes in the hope that everything is covered. Even so, without doing a full restore of the data, it's often hard to tell if the backups have truly worked.

Then, offsite backups are required to protect against fires, theft and floods. Backup media is usually unencrypted meaning that if they fall into the wrong hands, then the person has full access to your business information, emails and accounts.

## **The Solution**

In the past, Imitza has worked around the clock to bring businesses back from the brink following a disaster, even against the odds. The Imitza Online Vault negates the above risks and provides peace of mind by automatically maintaining a copy of your businesses' critical data at our secure remote location. We offer the following key benefits:

- **Automatic** – Daily backups that require no human intervention, with a daily report for peace of mind
- **Secure** – Your data is encrypted using the latest technology from the moment it leaves the server
- **Proven** – We have fully recovered businesses in the past, and have a wealth of experience at doing this
- **Robust** – Should your server or internet be unavailable, the system catches up on backups when it returns
- **Efficient** – We compress and transfer only the data that has changed, keeping backups quick and costs down
- **Affordable** – We own the technology and equipment outright so we can provide value pricing

We are a stable business and as you would expect your data is secured both in person using entry restrictions to the datacentre, CCTV and 24x7 security, as well as electronically using industrial strength firewalls and intrusion detection systems running around the clock.

We aim to provide a quality and high value service, and don't use restrictive contracts. Don't forget because we develop the technology, we can tailor our Online Vault to your exact requirements.
